***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: The present invention relates to CDMA2000 mobile networks, and more particularly to the interaction between always on mobile data devices and third generation CDMA2000 networks.

The prior art of record in combination or alone fails to teach or suggest these elements of independent claim 29 in combination with other elements. For example, independent claim 29 has claim limitations such as providing information about the plurality of networks in a preferred roaming list, the preferred list comprising a plurality of preference criteria associated with each of the plurality of networks, and a list of service features supported by mobile data device, waiting until the new network needs to be acquired, identifying which of the plurality of networks support a first one of the plurality of preference criteria by inspecting the first one of the plurality of preference criteria of each of the plurality of networks in the preferred roaming list, and selecting the new network from the identified networks, starting a search for the selected new network. For the above reasons independent claim 29 and its dependent claims 30-33, 35-36 are allowed.

2. Claims 29-33, 35-36 (now renumbered 1-7) are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

--(US2006/0104211A1) to Islam et al. discloses a method and apparatus for packet data service discovery.

--(US2004/0219916A1) to Kim et al. discloses a method for determining wireless communication system by selecting various wireless communication system without considering a corresponding wireless area.

--(US2003/0134637A1) to Cooper discloses a mobile device that includes processing circuitry and a memory for storing a preferred roaming list and system priority data.
